List of Figures . . . . .	13
List of Tables . . . . .	17
List of abbreviations . . . . .	19
1 Introduction . . . . .	23
1.1 Quantitative dynamical modelling in synthetic biology . . . . .	23
1.2 Contents of this thesis . . . . .	23
1.2.1 Outline . . . . .	23
1.2.2 Publications . . . . .	23
2 Background . . . . .	25
2.1 Introduction to synthetic biology . . . . .	25
2.2 System design in synthetic biology . . . . .	26
2.3 Introduction to Biochemical Modelling . . . . .	27
2.3.1 Graphical representation of biochemical systems . . . . .	27
2.3.2 Deterministic and Stochastic modelling . . . . .	27
2.3.3 Steady state and stability . . . . .	28
2.4 The genetic toggle switch . . . . .	29
2.4.1 Importance in natural systems . . . . .	29
2.4.2 Uses in synthetic biology . . . . .	30
2.4.3 Modelling the genetic toggle switch . . . . .	30
2.5 Introduction to Bayesian statistics . . . . .	33
2.5.1 Bayes' theorem . . . . .	34
2.5.2 Bayesian inference . . . . .	34
2.5.3 Model checking . . . . .	34
2.5.4 Prior selection . . . . .	34

2.5.5	Model parametric Robustness . . . . .	35
2.6	Approximate Bayesian Computation (ABC) . . . . .	37
2.6.1	ABC algorithms . . . . .	37
2.6.2	Particle sampling . . . . .	39
2.6.3	Perturbation . . . . .	39
2.6.4	Particle simulation . . . . .	40
2.6.5	Weight calculation . . . . .	40
3	Effect of feedback loops on switch robustness . . . . .	43
3.1	Introduction . . . . .	43
3.2	The bistable genetic toggle switch . . . . .	43
3.2.1	Bifurcation analysis . . . . .	44
3.3	Designing a simple synthetic switch . . . . .	46
3.3.1	Parameter scan for model stability . . . . .	46
3.3.2	Toggle switch parameter inference . . . . .	51
3.3.3	Design specifications . . . . .	52
3.3.3.1	Distance function . . . . .	52
3.3.4	Results . . . . .	53
3.4	Designing a more robust genetic toggle switch . . . . .	55
3.4.1	Models of the genetic toggle switch . . . . .	55
3.4.1.1	Bifurcation analyses . . . . .	57
3.4.2	ABC for model selection . . . . .	59
3.5	Discussion . . . . .	63
3.6	Summary . . . . .	65
4	Dynamics of multi-stable switches . . . . .	67
4.1	Introduction . . . . .	67
4.2	Stability Finder algorithm . . . . .	67
4.2.1	Algorithm overview . . . . .	68
4.2.2	Initial condition sampling . . . . .	70
4.2.3	Distance function . . . . .	71
4.2.3.1	Clustering methods . . . . .	71
4.2.4	Particle rejection . . . . .	72
4.2.5	Model checking . . . . .	72
4.3	Calculating robustness . . . . .	72
4.3.1	Case study 1: Infectious diseases . . . . .	75
4.3.2	Case study 2: Population growth . . . . .	78

4.4	Applications of Stability Finder . . . . .	80
4.4.1	Testing StabilityFinder . . . . .	80
4.4.2	Lu toggle switch models . . . . .	84
4.4.2.1	Extending the Lu models . . . . .	86
4.4.2.2	Multistability in the Lu models . . . . .	90
4.4.2.3	Extending the Lu switch to three nodes . . . . .	94
4.4.3	Mass Action switches . . . . .	96
4.4.3.1	Multistability in the MA switches . . . . .	101
4.4.3.2	Robustness prior dependence . . . . .	103
4.5	Discussion . . . . .	107
4.6	Summary . . . . .	108
5	Bayesian model fitting applied to flow cytometry data . . . . .	109
5.1	Introduction . . . . .	109
5.2	Flow cytometry and model fitting . . . . .	109
5.3	ABC-Flow algorithm development . . . . .	111
5.3.0.1	Distance Calculations . . . . .	113
5.3.0.2	Intensity calculation . . . . .	118
5.3.1	ABC-Flow model fitting . . . . .	118
5.3.1.1	Distance study . . . . .	119
5.3.1.2	ABC-Flow validation using simulated data . . . . .	121
5.4	Toggle switch data collection . . . . .	126
5.4.1	Circuit overview . . . . .	126
5.4.2	Methods . . . . .	128
5.4.2.1	<i>Escherichia coli</i> culturing conditions . . . . .	128
5.4.2.2	Glycerol stock preparation . . . . .	128
5.4.2.3	Revival . . . . .	128
5.4.2.4	Inducers . . . . .	129
5.4.2.5	Growth rate measurement . . . . .	129
5.4.2.6	Flow cytometry . . . . .	129
5.4.2.7	Concentration assays . . . . .	129
5.4.2.8	Time course assays . . . . .	130
5.4.3	Results . . . . .	131
5.4.3.1	Growth rate investigation . . . . .	131
5.4.3.2	Toggle switch concentration assays . . . . .	133
5.4.3.3	Toggle switch time course assay . . . . .	137
5.4.3.4	Plasmid construction . . . . .	140

## 10 CONTENTS

5.4.3.5	Polymerase Chain Reaction . . . . .	141
5.4.3.6	Digestion . . . . .	141
5.4.3.7	Agarose gel electrophoresis . . . . .	142
5.4.3.8	Ligation . . . . .	142
5.4.3.9	Transformation . . . . .	143
5.4.3.10	Colony PCR . . . . .	143
5.4.3.11	Sequencing . . . . .	144
5.5	ABC-Flow used on experimental data . . . . .	146
5.6	Discussion . . . . .	147
5.7	Summary . . . . .	148
6	Designing new switches . . . . .	149
6.1	Introduction . . . . .	149
6.2	Cloning overview . . . . .	149
6.2.1	Resulting switches . . . . .	151
6.3	Experimental design . . . . .	153
6.3.1	Stage 1 - Construction of pKDL071-plac/ara-araC . . . . .	153
6.3.2	Stage 2 - Construction of pKDL071-pluxtet-luxR . . . . .	155
6.3.3	Stage 3 - Construction of pKDL0713a . . . . .	158
6.4	Summary . . . . .	160
7	Conclusions . . . . .	161
7.1	Evaluation . . . . .	161
7.2	Future work . . . . .	161
	Bibliography . . . . .	163
	Appendices . . . . .	169
A	Biochemical kinetic models . . . . .	171
A.1	Ordinary differential equations . . . . .	171
A.1.1	Standard toggle switch with inducers . . . . .	171
A.1.2	Positive autoregulation on A and B with inducers . . . . .	177
A.1.3	CS-MA . . . . .	178
A.1.4	DP-MA . . . . .	180
B	Primers . . . . .	183
B.1	Primers used during PCR and sequencing . . . . .	183

C Algorithms . . . . .	185
C.1 Clustering algorithms . . . . .	185
C.1.1 Deterministic case . . . . .	185
C.1.2 Stochastic case . . . . .	185
C.2 K-means clustering . . . . .	187
